Nicola Barker (born 30 March 1966) is an English novelist and short story writer.

## Gordon Burn Prize

*The Gordon Burn Prize was launched in 2013 as a vehicle by which "to reward fiction or non-fiction written in the English language, which in the opinion*

The Gordon Burn Prize was launched in 2013 as a vehicle by which "to reward fiction or non-fiction written in the English language, which in the opinion of the judges most successfully represents the spirit and sensibility of [Gordon Burn]'s literary methods: novels which dare to enter history and interrogate the past ... literature which challenges perceived notions of genre and makes us think again about just what it is that we are reading."

The prize is jointly organised by the Gordon Burn Trust, New Writing North and Faber & Faber. The winner receives a prize sum (originally £5,000), and is offered the use of Burn's cottage in Berwickshire as a writers' retreat. Up until 2024, the prize ceremony was generally the first event of the Durham Book Festival. In 2024, the prize fund was doubled to £10,000 due to new sponsors and the award ceremony relocated to Newcastle upon Tyne.

## Photothermal therapy

*include polyaniline (PANI), polypyrrole (PPy), polythiophene (PTh), polydopamine (PDA), donor?acceptor (D-A) conjugated polymers, and poly(3*

Photothermal therapy (PTT) refers to efforts to use electromagnetic radiation (most often in infrared wavelengths) for the treatment of various medical conditions, including cancer. This neurotherapy is an extension of photodynamic therapy, in which a photosensitizer is excited with specific band light. This activation brings the sensitizer to an excited state where it then releases vibrational energy (heat), which is what kills the targeted cells.

Unlike photodynamic therapy, photothermal therapy does not require oxygen to interact with the target cells or tissues. Current studies also show that photothermal therapy is able to use longer wavelength light, which is less energetic and therefore less harmful to other cells and tissues.

## Goldsmiths Prize

*is a British literary award, founded in 2013 by Goldsmiths, University of London, in association with the New Statesman. It is awarded annually to a British*

The Goldsmiths Prize is a British literary award, founded in 2013 by Goldsmiths, University of London, in association with the New Statesman. It is awarded annually to a British or Irish piece of fiction that "breaks the mould or extends the possibilities of the novel form." It is limited to citizens and residents of the United Kingdom and the Republic of Ireland, and to novels published by presses based in the United Kingdom or the Republic of Ireland. The winner receives £10,000.

Tim Parnell of the Goldsmiths English department conceived and runs the prize, inspired by his research into Laurence Sterne and other eighteenth-century writers, like Denis Diderot, who experimented with the novel form. The prize "casts its net wider than most other prizes" and intends to celebrate "creative daring," but resists the phrase "experimental fiction," because it implies "an eccentric deviation from the novel's natural concerns, structures and idioms."

To date, Rachel Cusk is the author best represented on the prize's shortlists, having been shortlisted four times for *Outline* (2014), *Transit* (2016), *Kudos* (2018), and *Parade* (2024). Nine authors have been shortlisted twice: Amy Arnold, Sara Baume, Will Eaves, Deborah Levy, Eimear McBride, Anakana Schofield, Ali Smith, Adam Thirwell, and Isabel Waidner.

List of open-source video games

This is a list of notable open-source video games. Open-source video games are assembled from and are themselves open-source software, including public domain games with public domain source code. This list also includes games in which the engine is open-source but other data (such as art and music) is under a more restrictive license.

FWA Footballer of the Year

*Professional Footballers' Association's Players' Player of the Year award (PPY), Fans' Player of the Year award (FPY), the Young Player of the Year award*

The Football Writers' Association Footballer of the Year (often called the FWA Footballer of the Year, or in England simply the Footballer of the Year) is an annual award given to the player who is adjudged to have been the best of the season in English football. The award has been presented since the 1947–48 season, with the inaugural winner being Blackpool winger Stanley Matthews. The latest winner of the award as of 2024–25 is Mohamed Salah of Liverpool. Nine players have won the award on more than one occasion, with Thierry Henry and Mohamed Salah having won the award on the most occasions, with three wins each.

The winner is selected by a vote amongst the members of the Football Writers' Association (FWA), which comprises around 400 football journalists based throughout England. The award was instigated at the suggestion of Charles Buchan, a former professional footballer turned journalist and one of the Association's founders.

PFA Young Player of the Year

*awards in English football, namely the PFA Players' Player of the Year award (PPY), the Football Writers' Association's Footballer of the Year award (FWA)*

The Professional Footballers' Association Young Player of the Year (often called the PFA Young Player of the Year, or simply the Young Player of the Year) is an annual award given to the young player who is

adjudged to have been the best of the season in English football. As of 2021, players must have been aged 21 or under as of 1 July immediately preceding the start of the season; in the past the age limit has been 23, which led to criticism in the media over whether a player who was 24 years old at the end of the season could really be considered "young" in footballing terms. The award has been presented since the 1973–74 season and the winner is chosen by a vote amongst the members of the players' trade union, the Professional Footballers' Association (PFA). The first winner of the award was Ipswich Town defender Kevin Beattie. The current holder is Aston Villa player Morgan Rogers, who won the award on 19 August 2025.

Although the award is open to players at all levels, all winners to date have played in the highest division of the English football league system. In 2018 Ryan Sessegnon of Fulham became the first player from outside the top division of English football to be nominated for the award. As of 2025, only Ryan Giggs, Robbie Fowler, Wayne Rooney, Dele Alli and Phil Foden have won the award on more than one occasion. Only seven players from outside the United Kingdom have won the trophy, compared with fifteen winners of the main PFA Players' Player of the Year award. Although they have their own dedicated award, players aged 21 or under at the start of the season remain eligible to win the Players' Player of the Year award, and on three occasions the same player has won both awards for a season.

A shortlist of nominees is published in April and the winner of the award, along with the winners of the PFA's other annual awards, is announced at a gala event in London. The players themselves consider the award to be highly prestigious, because the winner is chosen by his fellow professionals.

.sh

*landing page of its primary developer uses the ppy.sh domain, such as osu.ppy.sh, old.ppy.sh, and status.ppy.sh. The main fork of the popular movie torrent*

.sh is the Internet country code top-level domain (ccTLD) for the British Overseas Territory of Saint Helena, Ascension and Tristan da Cunha, although it is primarily used in Saint Helena (Ascension Island has its own ccTLD, .ac). Registrations of internationalized domain names are also accepted.

On 22 February 2010, the ISO 3166-1 code for Saint Helena, Ascension and Tristan da Cunha changed to reflect the SH used for the ccTLD.

## 2-Phenylpyridine

*reaction of phenyl lithium with pyridine: C6H5Li + C5H5N → C6H5-C5H4N + LiH The reaction of iridium trichloride with 2-phenylpyridine proceeds via cyclometallation*

2-Phenylpyridine is an organic compound with the formula C6H5C5H4N (or C11H9N). It is a colourless viscous liquid. The compound and related derivatives have attracted interest as precursors to highly fluorescent metal complexes of possible value as organic light emitting diodes (OLEDs).

The compound is prepared by the reaction of phenyl lithium with pyridine:

The reaction of iridium trichloride with 2-phenylpyridine proceeds via cyclometallation to give the chloride-bridged complex:

This complex can be converted to the pictured tris(cyclometallated) derivative tris(2-phenylpyridine)iridium.

The degree and regiochemistry of fluorination of metalated 2-phenylpyridine ligands in platinum(II) complexes significantly modifies the emission properties of the complexes.
