MP 14 (Paris Métro)

*redeploy their MP 89 CA (MP 89–6) and 11 MP 05 trains from Line 14 to Line 4, and redeploy their MP 89 CC (MP 89–5) trains from Line 4 on Line 6, and*

The MP 14 (French: Métro Pneu appel d'offres de 2014; English: Rubber-tired metro ordered in 2014) is a rubber-tired electric multiple unit for the Paris Métro. Manufactured by Alstom as part of the Alstom Metropolis family of units, it is the seventh generation of the rubber-tired class of trains to be used on the system and is used on Line 14, Line 4 and Line 11. In the future, trains could be ordered for Line 1 and Line 6.

The automated (driverless) version of MP 14 started entering service on Line 14 in 2020, and on Line 4 in 2022, and a manually operated version started entering service on Line 11 in June 2023. The roll-out of the MP 14 is causing a significant reshuffle of the Métro's rubber-tired fleet. The Paris Métro will then redeploy their MP 89 CA (MP 89–6) and 11 MP 05 trains from Line 14 to Line 4, and redeploy their MP 89 CC (MP 89–5) trains from Line 4 on Line 6, and withdraw all remaining MP 59 and MP 73 trains from use on Line

11 and Line 6, respectively.

DSC is an abbreviation for Digital Still Camera

Models with a "V"-suffix include built-in GPS functionality

Multiprotocol BGP

*As an enhancement of BGP-4, MP-BGP provides routing information for various protocols, such as IPv6 (BGP4+) and multicast: MP-BGP maintains unicast and*

Multiprotocol Extensions for BGP (MBGP or MP-BGP), sometimes referred to as Multiprotocol BGP or Multicast BGP and defined in IETF RFC 4760, is an extension to Border Gateway Protocol (BGP) that allows different types of addresses (known as address families) to be distributed in parallel. Whereas standard BGP supports only IPv4 unicast addresses, Multiprotocol BGP supports IPv4 and IPv6 addresses and it supports unicast and multicast variants of each. Multiprotocol BGP allows information about the topology of IP multicast-capable routers to be exchanged separately from the topology of normal IPv4 unicast routers. Thus, it allows a multicast routing topology different from the unicast routing topology. Although MBGP enables the exchange of inter-domain multicast routing information, other protocols such as the Protocol Independent Multicast family are needed to build trees and forward multicast traffic.

As an enhancement of BGP-4, MP-BGP provides routing information for various protocols, such as IPv6 (BGP4+) and multicast:

MP-BGP maintains unicast and multicast routing information, and stores both types in different routing tables to ensure their separation.

MP-BGP supports unicast and multicast, and constructs different network topologies for each.

MP-BGP can maintain unicast and multicast routes based on routing policies. The unicast routing policies and configurations supported by BGP-4 can mostly be applied to multicast.

Multiprotocol BGP is also widely deployed in case of MPLS L3 VPN, to exchange VPN labels learned for the routes from the customer sites over the MPLS network, in order to distinguish between different customer sites when the traffic from the other customer sites comes to the provider edge router (PE router) for routing.

## Nikon D4S

*with a new option of RAW image capture in full resolution (16 MP) or a "Small" file (4 MP). In May 2014, the D4S received a Technical Image Press Association*

The Nikon D4S is a full frame professional DSLR camera announced by Nikon Corporation on February 25, 2014 to succeed the D4 as its flagship DSLR. The D4S offers a number of improvements over its predecessor including a new image sensor, new image processor, new battery, improved ergonomics and expanded ISO range. Additionally, improved auto focus (AF) algorithms and a new AF Tracking mode were introduced together with a new option of RAW image capture in full resolution (16 MP) or a "Small" file (4 MP).

In May 2014, the D4S received a Technical Image Press Association (TIPA) 2014 Award in the category of "Best Digital SLR Professional". In August 2014, the D4S received a European Imaging and Sound Association (EISA) award in the category "European Professional DSLR Camera 2014-2015".

The D4S was superseded by the Nikon D5, announced on January 6, 2016.

The D4S was discontinued in December 2016.

## State Highway 4 (Madhya Pradesh)

*Madhya Pradesh State Highway 4 (MP SH 4) is a state highway running from Lakwasa till Chanderi via Isagarh and Piprod. The highway connects towns in Northern*

Madhya Pradesh State Highway 4 (MP SH 4) is a state highway running from Lakwasa till Chanderi via Isagarh and Piprod.

The highway connects towns in Northern Madhya Pradesh. Chanderi is an important town for textile industries.

## Paris Métro Line 4

*Cascading of MP 59 to MP 89CC rolling stock began. 21 December 2012: The last MP 59 (#6021) was withdrawn after 45 years of service on Line 4. 23 March 2013:*

Line 4 (French pronunciation: [li?? kat??]) is one of the sixteen lines of the Paris Métro rapid transit system and one of its three fully automated lines. Situated mostly within the boundaries of the City of Paris, it connects Porte de Clignancourt in the north and Bagneux-Lucie Aubrac in the south, travelling across the heart of the city. Until its southern terminus was changed from Porte d'Orléans to Mairie de Montrouge in 2013, the line was sometimes referred to as the Clignancourt – Orléans Line. At 13.9 km (8.6 mi) in length, it connects with all Paris Métro lines apart from the very short 3bis and 7bis branch lines, as well as with all 5 RER express lines. It also serves three of the Paris Railway stations, Gare du Nord, Gare de l'Est, and Gare Montparnasse. It is the second-busiest Métro line after Line 1, carrying over 154 million passengers in 2004.

Line 4 was the first line to connect to the south side of the River Seine, through an underwater tunnel built between 1905 and 1907. Line 4 long ran the oldest cars still in service on the system, the MP 59. They used rheostats to dissipate the braking power through resistance and made it the hottest line in the system. Those trains were withdrawn from service during the course of 2011 and 2012 after 45 years (with some being in service for 50 years). They were replaced by the MP 89 CC stock transferred from Line 1, once new driverless trains made those redundant on that line. (From fr:Ligne 4 du métro de Paris).

In 2013, Line 4 was extended for the first time since its initial construction, into the southern suburbs of Montrouge. The line was further extended to Bagneux–Lucie Aubrac in 2022, connecting to the future Grand Paris Express. The line has been retrofitted for full automation, with the first automated trains commencing service on 12 September 2022.

Samsung Galaxy Z Fold 4

*up to 15 W. The Z Fold 4 features three rear cameras, including a 50 MP wide-angle camera, a 12 MP ultra-wide camera, and a 10 MP telephoto camera. The*

The Samsung Galaxy Z Fold 4 (stylized as Samsung Galaxy Z Fold4, sold as Samsung Galaxy Fold 4 in certain territories) is a foldable smartphone that is part of the Samsung Galaxy Z series. It was announced at the August 2022 edition of Galaxy Unpacked alongside the Galaxy Z Flip 4. It was released subsequently on August 25, 2022, as the successor to the Galaxy Z Fold 3.

BlackBerry Bold

*trackpad instead of the trackball. It utilizes a 528 MHz processor, and has a 3.4 MP camera available as an option. The major difference between the 9700/9780*

The BlackBerry Bold was a line of mid-range and high-end smartphones developed by BlackBerry Limited. The lineup was launched in 2008 with the BlackBerry Bold 9000. In 2009, the form factor was made more compact with the 9700 and the 9630. In 2010, the 9650 and 9780 was released with BlackBerry OS 6. In 2011, the 9780 was replaced by the 9790/9788 alongside the 9900/9930 series. The 9900/9930 and 9790, which have additional touchscreen displays, released in August and November 2011, respectively.

The Bold family was known for its distinctive form factor, QWERTY keyboard, and typical BlackBerry messaging capabilities with a different keyboard design than the Curve and Pearl series. The Bold series was usually more expensive and had more expensive materials (e.g. leather, soft touch rubber, carbon fiber, metal) compared to the Curve (plastic, glossy), and had higher specifications. There were two basic form factors within the Bold line: the original larger size on the 9000 and 9900, and the compact form factor of the other models.

## MP 40

*The MP 40 (Maschinenpistole 40) is a submachine gun chambered for the 9×19mm Parabellum cartridge. Developed in Nazi Germany, it saw extensive service*

The MP 40 (Maschinenpistole 40) is a submachine gun chambered for the 9×19mm Parabellum cartridge. Developed in Nazi Germany, it saw extensive service in the Axis forces during World War II.

Designed in 1938 by Heinrich Vollmer with inspiration from its predecessor the MP 38, it was heavily used by infantrymen (particularly by platoon- and squad-leaders), and by paratroopers, on the Eastern and Western Fronts as well as by the crews of armoured fighting vehicles. Its advanced and modern features made it a favorite among soldiers and popular in countries from various parts of the world after the war.

The Allies often referred to the MP 40 as the "Schmeisser", after the firearms-designer Hugo Schmeisser (1884-1953). In 1917 Schmeisser had designed the MP 18, which was the first mass-produced submachine gun. He did not, however, have anything to do with the design or development of the MP 40, although he held a patent on the magazine.

The MP 40's variants included the MP 40/I and the MP 41. Erma Werke produced an estimated 1.1 million MP 40s between 1940 and 1945.
